

IP Office Receptionist

Efficient and Professional Call Handling

Overview

Receptionists can handle dozens, even hundreds of calls daily, so it's easy to see how important it is to deploy a phone application that allows for efficient call handling. IP Office *Receptionist* offers a visual display of incoming calls and call status throughout the business on an easy-to-use PC interface. With visual access to everyone's phone status – who's busy, on the phone, away from their desk – receptionists can route calls quickly and accurately with a mouse click.

Receptionist is a powerful application that allows a single operator to manage calls for single site offices and even multiple locations to ensure prompt and professional handling of all calls.

Capabilities

Fast, accurate call handling – With its intuitive PC interface *Receptionist* allows for convenient click-and-drag call handling that helps improve the efficiency and effectiveness of the operator, even with large call volumes.

Visual call status – Receptions can see the status and availability of all associates on the network – who's on the phone, away from their desk, not to be disturbed, etc. – helping with speed and accuracy of call routing.

Centralized call management – With *Receptionist*, a single operator can handle calls for multiple offices – transferring calls between locations, adding people to conferences, managing voicemail messages for associates. The result: streamlined operations, consistency of service and cost savings.

Call handling for multiple businesses – When an operator manages calls for multiple businesses (for example, in a shared office environment), *Receptionist* enables the operator to quickly and accurately identify callers, greet them appropriately, and route calls to the right business. Sharing the receptionist resource reduces costs.

Benefits

- Streamline operations Handle large call volumes with just a single receptionist, in standalone or multi-site environments; use a single operator to manage calls for multiple businesses
- Provide professional service to callers Easy-to-use interface
 means receptionists can see the status of users on the network to
 quickly and accurately route calls to the right people
